Basic rules and Guidelines	 Every workGroup must contain as a part another WorkGroup Class or a Work Class WorkGroup must have a type. WorkGroup type can futher specify the types of workGroups or work types that it can contain 	1 2/2/12/10	contained by another expression Every Expression with a structureType=collection must have two or more "hasItem" properties pointing to two or more Expression with a structureType=ltem. Otherwise the structure should be changed from a "collection" to an "item" All Expressions with a structureType=collection must list the "items" they contain There can only be one "item" level in an Expression All "items" and "division" must list the "blocks" they contain. All "division" must identify the "Item" they belong to. All "blocks" must identify the "item" they belong to. There can only be one "block" level in any expression "blocks" should point to the smallest, most granular level in the OCHO tree. Blocks MAY but not HAVE TO contain elements Elements must list the Block they belong to
